Integrating safety with performance in corrections and justice centers

Arnold & O'Sheridan's engineers maintain a constant focus on innovations in the justice and security center industry to deliver results that incorporate proven best practices and cutting-edge technologies. From designing control rooms to integrating touch-screen technology with flexible camera systems and voice communications, Arnold & O'Sheridan offers a complete package of resourceful systems and engineering solutions to enhance the safety of all occupants.

We complement our technology systems with strategic lighting designs for enhanced security and energy-efficient mechanical systems for improved air quality. The integrated nature of our security streamlines video surveillance, allows for faster response time and enables justice and security centers to keep staffing costs in check.

Arnold & O'Sheridan offers a comprehensive suite of justice+security engineering solutions, including civil and structural, MEP, and technology and security. We are a single source for integrated engineering design.

*Civil + Structural + Mechanical
Electrical + Plumbing + Technology*
